

Компания "**ИНТЕРТУЛМАШ**" - поставщик оборудования

RÖHM в России.

RÖHM – всемирно известный разработчик и производитель зажимных приспособлений для металлообрабатывающей промышленности и робототехники. Благодаря неизменно высокому качеству и новаторским решениям, продукция RÖHM находит применение в самых разных отраслях экономики.

Sectional view toggle lever principle

NC-Compact vices

RKE

High-end NC-Compact vice. Mounting of the power transmitter in the steel body.

The RKE version is also available with cast body (**RKG**). Both clamping systems are also available in a simplified version (**RKE-L / RKG-L**).

Also offered in this series are an NC-Compact vice for 5-side machining (**RKE-LV**) and a clamping system with hydraulic actuation (**RKE-HL**).

Toggle lever principle

Sectional view RKE

Sectional view RKE-U L

RKE-U L

The NC-Compact vice RKE-U L is especially designed for the use in toolmaking (unit production). Especially used on CNC-machines and milling machines.

Thanks to the adjustable clamping range of the RKE-U L achieves a special effectiveness: Within the range of size every workpiece can be clamped without relocating the jaws.

Clamping system mechanical-mechanical with power transmitter, manually operated. Base mounting.

Sectional view RKK Size 2 - 5

RKK Size 2-5

NC-Compact vice for very high clamping precision. Clamping slide with toothing for continuously variable presetting. The power transmitter is mounted in the fixed jaw. This form of support enables high-precision clamping.

RKD

NC-Compact twin vice with two movable clamping jaws (left-hand/right-hand thread) and a fixed center jaw.

Sectional view RKD

RKZ

NC-Compact vice with two movable clamping jaws and large clamping stroke.

The force acts equally on both jaws via push spindle and draw spindle.

Form-fitted racks in the lower area of the main jaw mesh towards the center into a centrally mounted pinion.

Sectional view RKZ

Functional description / Schematic representation

Clamping system mechanical-mechanical with toggle lever

Single clamping

Type RKK

Type RKE

a) Clamping with power transmission

Mechanical pretensioning is achieved by turning the hand-crank. The threaded spindle with the large incline brings the movable clamping jaw into contact with the workpiece, whereby resistance can be noted on the hand-crank. Continuing to turn the crank in clockwise direction triggers automatic disengagement and switch to mechanical transmission.

Further turning of the crank moves a pressure pin axially, which generates the high clamping force through spreading of the toggle lever.

b) Presetting of different clamping forces

To avoid damage to sensitive workpieces caused by excessive clamping force, different clamping forces can be preset.

The presetting can be performed simply by turning the adjustment collar on the end of the spindle.

c) Mechanical clamping without power transmission

For consecutive clamping of multiple workpieces having uneven contact surfaces, greater pretensioning is required. Turning the adjustment collar to "0" deactivates the mechanical power transmission. The workpieces can then be mechanically pretensioned until the yield in the workpieces is eliminated.

The adjustment collar can then be set to the desired clamping force, and the high clamping force introduced.

RKK: The power transmission guarantees that the body remains mostly free from deformation; a very high clamping accuracy is achieved.

Twin clamping

Type RKD

Movable clamping jaw I is brought to the workpiece in Station 1 by clockwise turning of the spindle using the hand-crank, and held there at a clamping force of approx. 100 daN ("third hand function"). Continuing to turn the crank brings movable clamping jaw II to the workpiece in Station II and fixes it there. Turning the hand-crank further in clockwise direction all the way exceeds the release torque of the coupling pin and initiates mechanical power transmission of the toggle lever. The accumulating pressure is distributed evenly over the push-and-draw spindle on the clamping jaws. Compensating springs compensate for dimensional variations up to $\pm 3\text{mm}$ between workpiece I and workpiece II. During tensioning, both clamping stations must be occupied by identical workpieces!

Centric clamping

Type RKZ

The two movable clamping jaws are brought to the workpiece by clockwise turning of the spindle with the hand-crank (left-hand/ right-hand thread). Turning the hand-crank further in clockwise direction all the way exceeds the release torque of the coupling pin and initiates mechanical power transmission of the toggle lever. The accumulating pressure is distributed evenly over the push-and-draw spindle on the clamping jaws. Form-fitted racks in the lower area of the main jaw mesh towards the center into a centrally mounted gear.

This connection effects the synchronous, respectively simultaneous centric motion of the movable clamping jaw over the entire clamping stroke, regardless of clamping force and clamping span.

Basic - RKE

The new NC-compact vice RKE: optimized design with proven quality. Especially used on CNC-machines.

Horizontal, side or in connection with a basic plate vertical mounting, for example as DUO clamping tower (back to back)

Size 92 - clamping system mechanical-hydraulic with power transmitter, manually operated.

Size 125, 160 and 200 - clamping system mechanical-mechanical with power transmitter, manually operated.

Technical features:

- solid steel-body and all guidings hardened and ground
- long clamping slide with clutch, hardened on all sides, function surfaces ground
- locking pin with clamping force presetting
- clamping surface for clamping claws

Customer advantage:

- Central grease nipples for simple lubrication of the spindle thread and all guides
- solid chip guard prevents chips from penetrating the inside of the body
- thread-bore for receiving all RÖHM flat-clamping jaws with jaw width 125/160mm
- thread for fastening angle drive

The NC-compact-vice RKE is available from summer 2013 with the new design. Until then you will receive the conventionally design. Please contact us!

SKB Claw jaws - the clever alternative to embossing technology

Claw jaws SKB
without step, clamping depth > 2,5 mm,
workpiece clamping e.g. with
„Cliparc“ support rails

Claw jaws SKB: stronger, more flexible, more efficient - obviously the better choice

- Positive-fit clamping by the penetration of the hardened claw tips
- High holding forces: enhancement by a factor of 3 to 5 compared to standard jaws
- 5-side machining in one set-up
- Low material loss
- Shorter cycle times
- Reduced production costs and costs per piece
- For use on vices
- Easy to screw onto RÖHM NC-Compact Vices
- Easy, reliable clamping of parallel raw and sawed parts
- Hydraulic or manual clamping
- With fine step for clamping depth up to 2,5 mm
- Without fine step for clamping depth > 2,5 mm

Short - RKE-LV

Collision free 5-side machining in one operation

Clamping system mechanical-mechanical with power transmitter, manually operated
Short, compact design

Technical features:

- with tension clamping, 0-point of workpiece-end on operators side
- large clamping range
- no shifting of the movable top jaw
- steel body and all guidings hardened and ground
- massive chip protection

Customer advantage:

- minimal processing times
- high-precision positioning
- compact design
- carrier jaws incl. swivelling claw inserts; for clamping of circular and rectangular workpieces
- **clamping ranges carrier jaws:**
rightangular workpieces: 35 - 215 mm,
circular workpieces: dia. 65 - 225 mm

Short - RKE-M LV

Because of the short design the RKE-M LV is perfect suitable for operation on 5 sides in one setting.

Clamping system mechanical without power transmitter, manually operated.

The equipment with transferable and reversible stepped jaws enables a high flexibility and wide range.

Adjusted to the workpiece, a large number of different clamping jaws of the ROHM-assessories-program is available.

Technical features:

- solid steel body
- all guide surfaces are hardened and ground
- long clamping slide with clutch, hardened on all sides, function surfaces ground
- clamping surfaces for clamping claws
- shortend design with few interference sides; low risk of collision
- interchangeable jaw program for all kinds of operation

Customer advantage:

- the NC-compact vice can be actuated on both sides

Reverse - RKE-U L

The NC-Compact vice RKE-U L is especially designed for the use in toolmaking (unit production). Especially used on CNC-machines and milling machines.

Thanks to the adjustable clamping range of the RKE-U L achieves a special effectiveness: Within the range of size every workpiece can be clamped without relocating the jaws.

Clamping system mechanical-mechanical with power transmitter, manually operated
Base mounting.

Technical features:

- stationary jaw at the drive end
- with tension clamping, 0-point of workpiece-end on operators side
- actuation with power transmitter in the area of the stationary jaw
- locking pin with clamping force presetting
- mounting thread for workpiece stop

Customer advantage:

- no shifting of the movable top jaw
- large clamping range
- The solid body is hardened on all sides
- top jaws reversible, hardened and ground
- massive chip protection over the entire clamping range

Premium - RKK with SA / SGN jaws

They are primarily used with modern CNC milling machines and machining centers requiring a high degree of accuracy.
Clamping possible on 3 sides.

RKK size 1: Clamping system mechanical-hydraulic with power transmitter, manually operated; with stepped jaws
RKK sizes 2 to 5: Clamping system mechanical-mechanical with power transmitter, manually operated; with standard jaws SA and normal jaw SGN

Compact and solid construction makes RÖHM NC-compact vices stand out.

Technical features:

- the solid steel body and all guide surfaces are hardened and ground on all sides
- locking pin with clamping force presetting
- mounting thread for workpiece stop
- clamping surface for clamping claws
- due to on both sides fixed grease nipples the lubrication of the spindle thread and all guides is ensured

Customer advantage:

- non-deformable design for very high clamping accuracy
- size 1: long clamping slide with diagonal offset, hardened on all sides, function surfaces ground
- size 2-5: long clamping slide with toothing

Duo - RKD

For flexible clamping on machining centres and other production systems.
Three clamping positions: horizontal, vertical and lateral

Clamping system mechanical-mechanical with power transmitter, manually operated

Only approx. 1 1/2 crank rotations at max. clamping force.

Technical features:

- pre-adjustment of clamping force by means of locking system
- double-clamping via two mobile claws (left-right hand thread) and one immobile centre jaw
- the solid steel body and all guide surfaces are hardened and ground on all sides
- fastening of the vice with clamping claws only
- thread for fastening angle drive

Customer advantage:

- constant clamping force for increased repeating accuracy 0,01
- no overloading of the vice at max. clamping force
- self-locking power transmission
- the clamping thread of the spindle is protected in all positions to prevent the penetration of dirt and chips
- due to on both sides fixed grease nipples the lubrication of the spindle thread and all guides is ensured

Duo - RKD

Duo - RKD-M

For flexible clamping on machining centres and other production systems.
Three clamping functions: Twin clamping - centric clamping - single clamping

Clamping system mechanical without power transmitter, manually operated.

With drive spindle on one side.

Horizontal, vertical or side mounting.

Technical features:

- machine vice with two mobile jaws and one immobile centre jaw
- the solid steel body and all guide surfaces are hardened and ground on all sides
- fastening of the vice with clamping claws only (direct mounting on request)
- constant clamping force during every clamping operation and high repeating accuracy if torque wrenches are used
- large clamp stroke, 50 mm per jaw

Customer advantage:

- the clamping thread of the spindle is protected in all positions to prevent the penetration of dirt and chips
- due to on both sides fixed grease nipples the lubrication of the spindle thread and all guides is ensured
- the compact vice is on delivery equipped for twin and centric clamping
- operation by means of provided hand crank

Clamping ranges RKD-M

Clamping ranges: Twin clamping

Function:

To adjust mobile jaw I with regard to the workpiece of station I turn the spindle to the right by means of the handle (left-right handed thread). About 1 kN are applied to keep the jaw in the adjusted position (third-hand function). By further turning the lever, mobile jaw II is adjusted with regard to workpiece in station II, locked and power via the mechanical spindle is transmitted. By means of compensating springs, variations between workpiece I and II of up to ± 3 mm are compensated.

Both stations must always be equipped with identical workpieces for clamping!

Fixing nut - stop on the right (spindle provides compensation)
Jaw stroke: "Z" Station I: 50mm
Station II: 56mm

Centric - RKZ

Horizontal, vertical or side mounting.

Clamping system mechanical-mechanical with power transmitter, manually operated

Self-centering with two mobile jaws

Technical features:

- constant force for each clamping process
- increased repeating accuracy
- the steel body and all guide surfaces are hardened and ground
- fastening of the vice with clamping claws only
- clamping accuracy at the centre: $\pm 0,01$ - Repeating accuracy: 0,01

Customer advantage:

- the clamping thread of the spindle is protected in all positions to prevent the penetration of dirt and chips
- due to on both sides fixed grease nipples the lubrication of the spindle thread and all guides is ensured
- equipped as standard with stepped interchangeable jaws

Centric - RKZ-M

Highly suitable for 5-side machining

Clamping system mechanical without power transmitter, manually operated.

Self-centering with two mobile jaws

Technical features:

- Short, compact design
- large stroke
- the steel body and all guide surfaces are hardened and ground
- constant clamping force during every clamping operation and high repeating accuracy if torque wrenches are used
- clamping accuracy at the centre: $\pm 0,02$ - repeating accuracy: 0,01

Customer advantage:

- equipped as standard with stepped interchangeable jaws
- special clamping jaws available on request

For the universal application on milling machines and machining centers.
Horizontal, vertical or side mounting with height adjustment $\pm 0,02$.

Standard version

High reliability, long working life and high precision

Clamping system mechanical-hydraulic with power transmitter, manually operated.

Technical features:

- steel body with stationary jaw, uniformly forged into the die
- locking device for the mechanical pre-clamping of workpieces
- automatic reclamping in the hydraulic unit via the installed belleville spring
- all wear parts, primarily the jaw guides, are hardened and ground
- robust guide surface of the movable jaw

Customer advantage:

- robust and maintenance-free spindle
- rapid-change hydraulic unit
- with normal jaws and hand crank
- locking pin is protected against dirt and chips
- rapid adjustment of the clamping range via locking pin

Tool group A27

For the universal application on milling machines and machining centers. Horizontal, vertical or side mounting with height adjustment $\pm 0,02$.

With angle drive

High reliability, long working life and high precision

Clamping system mechanical-hydraulic with power transmitter, manually operated.

Technical features:

- steel body with stationary jaw, uniformly forged into the die
- automatic reclamping in the hydraulic unit via the installed belleville spring
- all wear parts, primarily the jaw guides, are hardened and ground
- robust guide surface of the movable jaw
- with normal jaws and hand crank

Customer advantage:

- robust and maintenance-free spindle
- the short design of the movable jaw (made of steel) allows a reduced overall length even by max. clamping width
- further stepped or special top jaws can be fixed on the top of the stationary and movable jaws
- locking pin is protected against dirt and chips
- large clamping range

Machine vices RB and RH

For high clamping accuracy

Special technical features of the RÖHM Machine vices RB and RH:

- Steel body with stationary jaw, drop forged or body made from spherical graphite cast
- Large clamping range
- Long guidance of the movable jaw
- High accuracy
- All wearing parts, above all the jaw guides, are hardened and ground
- Rapid clamping range adjustment
- Can be used on a rotation plate with graduation
- Base equipped with longitudinal grooves for accurate fixing on the machine table
- Height modulation in the special version

RB

RÖHM Machine vices RB:

- Clamping system: mechanical/hydraulic
- Rapid adjustment of the clamping range via 1 protruding bolt.
- After withdrawing the protruding bolt, the movable jaw is moved to the desired position and again locked by protruding bolt.
- Sizes 2, 3 and 4 steel body; sizes 5, 6 and 7 body made out of high-grade spherical graphite cast.

RH

RÖHM Machine vices RH:

These hydraulic high-vices have proved themselves in daily use by problem-free-application and reliable function over a period of years.

- Clamping system: hydraulic with stroke
- Rapid adjustment of the clamping range via 1 protruding bolt.
- After withdrawing the protruding bolt, the movable jaw is moved to the desired position and relocked with the protruding bolt (see RB Machine vices).
- Operating pressure for max. clamping force: 360 bar
- Sizes 2, 3 and 4 steel body; body made out of high-grade spherical graphite cast for size 5

For high clamping accuracy.

Mechanical drive with the hand crank and hydraulic power intensification via the hydraulic unit.

Rapid adjustment of the clamping range via locking pin

Clamping system mechanical-hydraulic with power transmitter, manually operated.

Technical features:

- with SGN normal jaws and hand crank
- steel body with stationary jaw, drop forged at sizes 2, 3 and 4
- sizes 5, 6 and 7 body made out of high-grade spherical graphite cast
- long guidance of the movable jaw
- all wear parts, primarily the jaw guides, are hardened and ground

Customer advantage:

- no overloading of the vice at max. clamping force
- constant clamping force for increased repeating accuracy
- independent tension increase in the rapid-change hydraulic unit via integrated disc springs
- pre-setting of clamping force with blocking device for mechanical pre-clamping of workpiece stacks
- self-locking power transmission

Particularly suitable for reciprocal milling via electric driven workholding pump unit for double acting cylinders or turbo air hydraulic-pump
Rational clamping of series parts

Rapid adjustment of the clamping range via locking pin
Clamping system hydraulic with stroke, hydraulic connection for single-acting cylinders.

Technical features:

- With SGN normal jaws and hydraulic connection
- jaw travel approx. 7,5 mm
- sizes 2, 3 and 4 steel body
- body made out of high-grade spherical graphite cast for size 5
- operating pressure for max. clamping force: 360 bar

Customer advantage:

- infinitely variable and precise clamping force presetting
- constant clamping force for increased repeating accuracy
- clamping force is maintained even if pressure drops off
- can be used for automatic work cycles
- constant clamping force for the entire jaw travel

Made from special cast metal for flexible application
These machine vices are particularly suitable for application on conventional machine tools.

Clamping system mechanical without power transmitter, manually operated.

Technical features:

- with SGN normal jaws and hand crank
- high clamping force through roller bearing supported spindle
- low design made of special cast metal
- swivel bases as universal type with ground contact edge for supporting the vice
- vice body and swivel bases are equipped with longitudinal grooves for accurate alignment

Customer advantage:

- entire clamping range within reach by turning the hand crank
- spindle covered in operating range
- adjusting V-jaw guidance
- extensive, interchangeable assortment of jaws
- can be used on a rotation plate with graduation

Made from special cast metal for flexible application
These machine vices are particularly suitable for application on conventional machine tools.

Centric clamping for milling and planing of forms, slots and grooves of all kinds.

Clamping system mechanical without power transmitter, manually operated.

Technical features:

- with SGN normal jaws and hand crank
- low design made of special cast metal
- the side jaw guides enable simple and exact positioning of the vice
- swivel bases as universal type with ground contact edge for supporting the vice
- centric clamping by right-hand and left-hand threaded spindle

Customer advantage:

- spindle covered in operating range
- extensive, interchangeable assortment of jaws
- can be used on a rotation plate with graduation

Reliable clamping and mounting of workpieces on drilling and measuring machines.

Standard version

Clamping system mechanical, manually operated

Technical features:

- body made out of special cast metal
- mounting possibilities on the side and frontal
- long guidance for movable jaw also in outer clamping range
- both jaws with contact surface for clamping flat workpieces
- clamping jaws reversible: one size smooth, respectively with longitudinal and transversal prisms, one side grooved, both sides ground

Customer advantage:

- low, stable design with thread spindle
- entire clamping range within reach by turning

Tool group A12
Type 728-00 **BOF**
With V-jaw and normal jaw SBO

Item no.	Size	Jaw width	Clamping capacity	Jaw height	Length	Height	Length body	Weight kg

111597 ●	4	160	220	50	692	95,5	445	25

Reliable clamping and mounting of workpieces on drilling and measuring machines.

For rapid clamping and unclamping, especially for series machining of workpieces.

Quick action vice

Clamping system mechanical, manually operated

Technical features:

- body made out of special cast metal
- mounting possibilities on the side and frontal
- long guidance for movable jaw also in outer clamping range
- both jaws with contact surface for clamping flat workpieces
- clamping jaws reversible: one size smooth, respectively with longitudinal and transversal prisms, one side grooved, both sides ground

Customer advantage:

- one-hand operation
- positive locking

Reliable clamping and mounting of workpieces on drilling and measuring machines.

Standard version

Clamping system mechanical, manually operated

Technical features:

- body made out of cast metal
- movable jaw, mounted on side
- stationary jaw with three vertical and one horizontal prism
- both jaws with contact surface for clamping flat workpieces
- jaws and spindle gunmetal-finished

Customer advantage:

- the thread spindle is covered by a protecting sleeve
- entire clamping range within reach by turning
- constant unit length, spindle moves protected inside the handle
- solid and handy version

Tool group A12
Type 729-60 **DPV**
With V-jaw and normal jaw SBO

Item no.	Size	Jaw width	Clamping capacity	Jaw height	Length	Height	Length body	Width	Weight kg

Reliable clamping and mounting of workpieces on drilling and measuring machines.
3 mounting options via two additional contact surfaces machined at right angles: base, right-hand and end-side.

Standard version

Clamping system mechanical, manually operated

Technical features:

- body made out of cast metal
- movable jaw, mounted on side
- stationary jaw with three vertical and one horizontal prism
- both jaws with contact surface for clamping flat workpieces
- jaws and spindle gunmetal-finished

Customer advantage:

- the thread spindle is covered by a protecting sleeve
- entire clamping range within reach by turning
- constant unit length, spindle moves protected inside the handle
- solid and handy version

007182 ●	2	100	93	30	279	65	189	159	5,1

D. I. Y. design for small drill stands.
Reliable clamping and mounting of workpieces on drilling and measuring machines.

Clamping system mechanical, manually operated

Technical features:

- body made out of cast metal
- long mounting slots
- jaws and spindle gunmetal-finished
- fixed jaw with vertical and horizontal V-jaw

Customer advantage:

- lever movable
- both jaws have a seat for retaining flat workpieces

Tool group A12
Type 729-60 **BSH**
Small, light D. I. Y. design

Item no.	Size	Jaw width	Clamping capacity	Length body	Width body	Height	Jaw height	Weight kg
007193 ●	1	65	65	125	105	43	25	1,2

007196 ●	3	100	80	170	175	57	25	4,2

Sturdy craftsman design for drill stands, bench drills and drill presses. Also suitable for milling machines and shapers.

Clamping system mechanical, manually operated

Technical features:

- long mounting slots
- jaws and spindle gunmetal-finished
- fixed jaw with vertical and horizontal V-jaw
- the moveable steel jaw is supported by a cast jaw with internal guidance
- body made out of cast metal

Customer advantage:

- both jaws have a seat for retaining flat workpieces
- long lever for maximal clamping force

Tool group A12

¹⁾ only for DPV 3-W

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Simple clamping and releasing with the inner hexagon key. Clamping jaws adjustable in steps, lock in automatically.

Technical features:

- with draw-down effect
- made out of alloyed tool steel, hardened and precision ground
- horizontal and vertical ground prism
- no spindle which, for example, could become clogged during erosion

Tool group A29
Type 735-60 **PL-S micro**
with quick adjustment

Item no.	Size	Squareness	Parallelism	Jaw width	B	Total height	C	Length body	G	H	J	Work locator	Weight kg

1179518	3	0,005	0,002	120	150	90	40	280	50	60	70	M5	13,5

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Clamping and releasing with locking screws on the top side. Clamping jaws adjustable in steps, lock in automatically.

Technical features:

- with draw-down effect
- made out of alloyed tool steel, hardened and precision ground
- horizontal and vertical ground prism
- no spindle which, for example, could become clogged during erosion

Tool group A29
Type 735-70 **PLF**
with quick adjustment in accuracy to gauge

Item no.	Size	Squareness	Parallelism	Jaw width	Total height	B	C	G	Length body	Weight kg
1111185	0	0,005	0,005	50	50	65	25	25	140	1,4

1111187	2	0,005	0,005	100	90	125	45	45	245	7,3

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Clamping and releasing with threaded spindle

Technical features:

- horizontal and vertical ground prism
- made out of alloyed tool steel, hardened and precision ground

Tool group A29
Type 735-50 **PL-G**
Precision vices

Item no.	Size	Squareness	Parallelism	Jaw width	B	Total height	C	Length body	G	H	J	Weight kg
1111182	0	0,005	0,002	60	55		25	110	25	25	33	1,6
1111183	1	0,005	0,002	73	100	74	35	210	32	33	45	4
1111184	2	0,005	0,002	88	125	88	40	250	48	40	50	7,6

For accurate jig operation of workpieces on grinding machines, jig grinding machines and other precision machines.

The angle of this model allows the use of the vice on 4 different faces (on the base, on the face and on both sides).
Simple clamping and releasing with hand crank

Technical features:

- made from alloy steel, hardened and ground
- the horizontally ground prism in the movable jaw guarantees the safe clamping even of formed parts
- with spindle

Tool group A29
Type 735-00 **PSK-S**
with 0.005 mm accuracy to gauge and keep-down effect

Item no.	Size	Jaw width	Clamping capacity	Jaw height	Length	Height	Weight kg
768773	2	65	100	28	210	65	4
768774	3	100	130	38	270	78	10
768775	4	125	150	40	300	85	15

For accurate jig operation of workpieces on grinding machines, jig grinding machines and other precision machines.
Without spindle for erosion, grinding and inspection work.

The angle of this model allows the use of the vice on 4 different faces (on the base, on the face and on both sides).

Technical features:

- made from high-grade tool-steel, completely hardened, all sides precision ground
- the horizontally ground prism in the movable jaw guarantees the safe clamping even of formed parts
- without spindle

Tool group A29
Type 735-10 **PSK-O**
precision grinding and control vice with 0.003 mm accuracy to gauge

Item no.	Size	Jaw width	Clamping capacity	Jaw height	Length	Height	Weight kg
768778	2	65	90	28	210	65	4
768779	3	100	120	38	270	78	10
768780	4	125	140	40	300	85	15

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Technical features:

- made out of alloyed tool steel, hardened and precision ground
- bearing pins and headed dowels hardened and ground with accuracy of 0,001 mm
- the clamping device can be positively locked in every angular position

Tool group A29
Type 736-20 **PS-SV**
front swivelling axis

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

2-dimensional angle adjustment via vernia, for size 1 with 3'-vernia, for size 2 with 5'-vernia.
The fine adjustment screw in the base permits accurate angle setting.
Size 2 for particularly heavy machining work.

Technical features:

- positive locking in every angle position desired via locking screws
- made out of alloyed tool steel, hardened and precision ground
- 360° turnable

Tool group A29
Type 736-50 **Precision sine vice PS-ZD**
2-dimensional

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Technical features:

- tapped index holes
- spaced 25 mm apart
- bearing pins and headed dowels hardened and ground with accuracy of 0,001 mm
- the clamping device can be positively locked in every angular position
- made out of alloyed tool steel, hardened and precision ground

Tool group A29
Type 737-50 **Precision sine angle plates SW-R**

Item no.	Size	Squareness	Parallelism	Angular accuracy	A	E	F	K	L	M	α	Weight kg

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

Technical features:

- with magnetic plate
- manually operated by means of a lever
- bearing pins and headed dowels hardened and ground with accuracy of 0,001 mm
- the clamping device can be positively locked in every angular position
- made out of alloyed tool steel, hardened and precision ground

Tool group A29
Type 737-80 **Precision sine angle plates SW-M**

Item no.	Size	Squareness	Parallelism	Angular accuracy	A	E	F	K	α	Weight kg
370785 ■	1	0,005	0,002	at 45° ± 15"	150	81,5	150	100	0° - 45°	12

Used on grinding, milling and engraving machines, jig boring machines, for measurement and inspection work.

With angle plate with T-slots arranged side by side, as per DIN 650. The mounting plate can be exactly adjusted in two dimensions by means of a 5"-vernier. The fine adjustment screw in the base permits accurate angle setting.

Technical features:

- with tilt and rotation axis
- bearing pins hardened and ground to an accuracy of 0,001 mm
- positive locking in every angle position desired via locking screws
- made out of alloyed tool steel, hardened and precision ground

Tool group A29
Type 737-70 **Precision angle plates SW-ND**
2-dimensional

For accurate setting of any angle between 0° and 90° on production and measuring machines.

Two base surfaces with folding magnets for horizontal and vertical use.

Technical features:

- all parts made out of alloyed steel, hardened and precision ground
- angle setting according to the sine principle with gauge blocks
- 3" angular accuracy

Tool group A37
Type 737-00 **Precision sine angle setting device PSE**
3" angular accuracy

Item no.	Size	A	B	C	K	α
890706	0	75	34	70	50	0°-90°
220715	1	160	63	131	100	0°-90°

System description precision sine vice

The sine vice can be pivoted upwards by turning the adjustment screw. The gauge block is inserted between surface A and the headed dowel and the adjustment screw is turned back. Thus, the sine vice is pressed against the gauge block and positively locked.

When adjusting small angles, you place the appropriate gauge block on support surface B. Since this surface is 1 mm lower than the support surface A, an additional 1 mm must be taken into account for the tabula value determined.

Formula for calculating the gauge block x

$$x = \sin \alpha \cdot K \quad \text{for locating surface A}$$

$$x = \sin \alpha \cdot K + 1 \quad \text{for locating surface B}$$

Example:

Searched: gauge block for angle setting 24° 15' for precision sine vice PS-SV

Given: $K = 100$; $\sin \alpha = 0,4107$

Calculation: $x = 0,4107 \cdot 100 = 41,07$

The height of the gauge block is 41,07mm

Clamping numerous workpieces on a pallet or a machine table.
Clamping of numerous small and big workpieces on few space.

The basic elements are designed for highly versatile use and adaptation to different workpiece sizes.
Optimum utilization of the working range of the machine is achieved by mounting several clamping rails in the longitudinal or transverse direction.

Technical features:

- the scale on the rail allows reading off the exact jaw position and thus repeatability at any time
- constant clamping force during every clamping operation and high repeating accuracy if torque wrenches are used
- serrations on top face for absolutely safe and accurate fastening of jaws

Customer advantage:

- T-slot nuts in size 10mm - 36mm available
- high clamping accuracy
- great machine durability
- reduced tool changing times

Delivery includes:

1 x Locating jaw, 4 x Intermediate jaw, 1 x Clamping rail, 2 x T-slot nut for nut 16 mm, 4 x Single clamp, 4 x Work locator

POWER-GRIP

Userfriendly modular pallet system

- rugged, productivity increasement
- mount and adjust only once
- machine on all machine tables

„Multifunctional machining possibilities in connection with RÖHM clamping tools.“

Your production will be like a walk in the park

Nothing can compare to the POWER-GRIP system. It easily fits into any production process – even automated ones – and is simply different from others and works in a more customer-oriented way:

The dimensions of the palleting system are standardized here via different inside micrometers. A major advantage for you! After the correct design of the inside micrometer, your devices are no longer bound to single machines. Where and on which machine you now machine your workpiece will no longer play any role.

With POWER-GRIP, your device can be used throughout your factory without difficulties – as easily as a walk in the park!

All good things come in threes

1. It doesn't matter whether you measure, mill, turn, wire-cut/cavity sink by EDM, face/circular grind, drill or laser-cut – POWER-GRIP puts an end to the jumble of incompatible systems and clamping tapers. POWER-GRIP: A single interface for your entire production sequence!
2. The POWER-GRIP system clamps gently on material at 17.000 N and up. On request, there is extra power available up to 30.000 N per spring unit.
3. POWER-GRIP is made of high-quality material. The reference surfaces are thoroughly hardened. The basic support consists of 1.2085 steel, the spring unit is made of M333 (Böhler, Gillette blade steel). The entire system is rust-resistant. The material fatigue is negligibly low, the lifetime of the components almost unlimited!

Milling

The modular structure allows all machine tables to be loaded individually. Machining of cylindrical and square workpieces by changing the workpiece pallets super-fast.

Turning

Simple coupling of the workpiece from milling to turning machining.

Eroding

Taking the workpiece from turning and milling to eroding. Checking the machining progress is always possible on the measuring machine.

Measuring

In order to check after every machining operation, the machined workpiece can be quickly taken up at any time without reference loss.

POWER-GRIP structure

1. Change pallet
2. Centering / clamping collets
3. Clamping cone
4. Axially resilient centering lip
5. Centering unit
6. Piston
7. Pallet carrier
8. XY-reference surfaces
9. Z-reference surfaces
10. Spring
11. Bore for Z-support cleaning

The well thought-out POWER-GRIP technology is your production's safety belt. During pallet changes, contact with reference surfaces is ruled out from the very beginning.

The axially resilient centering lips compensate for thermal distortion, the Z supports are cleaned automatically during the clamping process. This ensures an extra advantage with regard to reliability and precision.

Accessories

Pneumatic operating unit

For up to 3 air connections. Allows pallets to be released, Z-support cleaning, pneumatic reclamping and air purge supply.

Gasket

For protecting from contamination during machining and to seal during erosion.

Protection caps

Optimum protection for non-active centering units.

Support

For gentle depositing and fixing of pallets on rotary tables.

Basic body cover

For covering the pallet support instead of a centering unit. As an inexpensive option for later retrofitting of the pallet support with a centering unit.

Special solutions

2x pallet support for direct mounting of a special clamping device.

Machine table of a profile-grinding machine with 8 centering and clamping sleeves integrated into the machine table, with special pallet.

Machine rotary table 860 mm for machine Hedelius with countersunk centering and clamping sleeves.

Machine table 1400 x 750 mm with countersunk centering and clamping sleeves.

Ø 510 mm face plate with POWER-GRIP centering and clamping sleeves for machining of turbine blades in the aircraft industry.

Lathe chuck Ø 200 mm with integrated POWER-GRIP flange.

POWER-GRIP 6x clamping device for the machining of crankshafts.

The headquarter: our parent plant in Sontheim/Brenz.

The RÖHM parent plant is located in Sontheim/Brenz. In this ultra-modern production facility comprising 41,000 m², optimum conditions have been achieved in order to solve the extensive range of discerning construction and production tasks making the company even better, faster and more efficient in the future.

Sontheim/Brenz

All national and international activities are planned and co-ordinated at the administrative headquarters in Sontheim. Thanks to the excellent infrastructure and transport routes available, this location is ideal for a company relying on perfect product quality as well as maximum flexibility. Furthermore, the region around Sontheim offers another key basis for the success of our company: it is rich in quality awareness and motivated employees with the result that we are ideally prepared for the challenges of the future. The parent plant uniquely unites mass production, serial production and customised individual production under a single roof.

Key locations for the company: Dillingen and St. Georgen.

Such strong growth on the part of the RÖHM Group is also obviously associated with higher requirements on development and production capacities. The demands of today and tomorrow can be complied with the two facilities in Dillingen and St. Georgen.

Dillingen/Danube

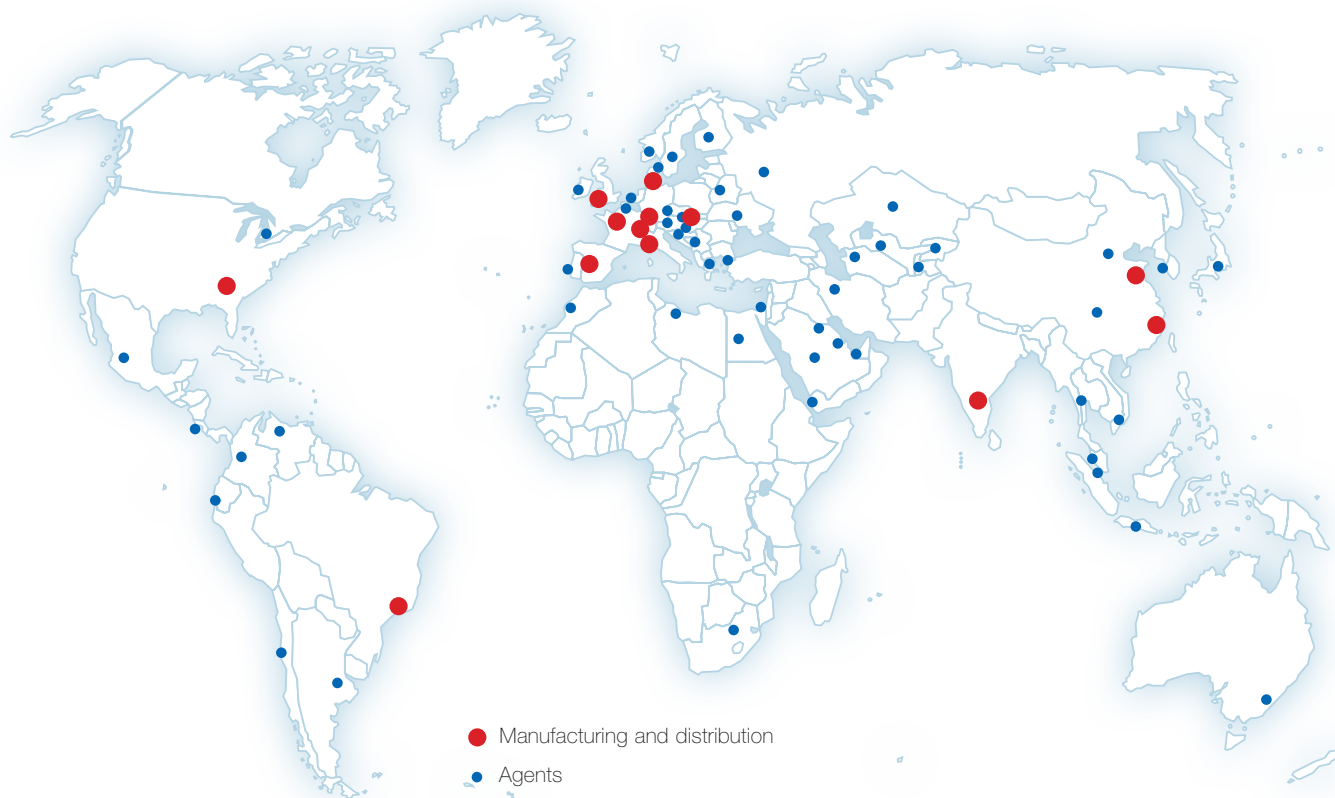

St. Georgen

Plant: Dillingen/Danube | This branch plant in Dillingen was put into operation by the RÖHM Group as early as 1953. Thanks to extremely positive development, the plant is subject to constant expansion and modernisation. For this reason, new modern production facilities were built in 1982 and 1991. In 2007 RÖHM built a new production hall for two portal turning and milling machines. This enables machining of workpieces up to 4 metres in length which will secure a leading market position for the RÖHM brand in the future.

More than 300 employees are primarily involved in engineering and manufacturing lathe chucks, machine vices and special clamping equipment for turning and milling machinery as well as for machining centres.

Engineering and sales department St. Georgen | Apart from standard mandrels, tailor-made solutions for a wide variety of requirements are also manufactured here in this small but accomplished high-tech forge. RÖHM retains mechanical or power-operated mandrels, sliding jaw mandrels and hydraulic mandrels for its customers for tensioning workpieces in drill holes or interior contours.

Always close to our customers. With locations all around the world.

Customer orientation at RÖHM has less to do with marketing than with attitude. We consider customer proximity as an intensive dialogue with our partners as well as direct presence on key international markets.

General conditions of sale and delivery

§ 1 Quotation, Formation of Contract and Content of Contract

1. The present General Terms of Sale and Delivery apply exclusively. We do not recognise any terms and conditions that are contradictory or different from our own, unless we have explicitly given our written agreement to do so. Our Terms of Sale and Delivery will also apply if we effect delivery to the Purchaser without any reservation in full awareness of the contradictory or different nature of the terms of the Purchaser, as compared to our own Terms.
2. Our quotations are always subject to change without notice unless they have been explicitly described as binding. The contract will only materialise upon our written confirmation and in line with the content thereof and by way of performance/delivery on our part. If delivery/service is immediately provided without any confirmation, the invoice will also be deemed to be the order confirmation.
3. Our General Terms of Sale and Delivery will only apply to a business entity as defined in Section 14 BGB [German Civil Code].
4. Costs for the compilation of drawings for specific constructions will be borne by the Orderer if, for reasons for which we are not responsible, the quotation does not lead to an order placement.
5. All particulars regarding weights, dimensions, services and technical data that feature in our printed matter, catalogues, price lists or in other contract documents are only approximate, unless they have been explicitly described as binding.
6. We retain the right to amend the construction and form of the subject of contract, providing this does not involve unreasonable alterations for the Orderer.
7. The documentation comprises an assembly layout, piece list with details of the wearing and spare parts, as well as operational and maintenance instructions; this is always in the German language. Documentation is only in paper form or in digital form. For digital forms, the texts are provided in the formats .TXT, .RTF or .DOC; drawings and piece lists are in the .TIF format (grid format). Any documentation in excess thereof will be billed and is subject to particular arrangement.
8. For testing, when specific temperatures, times and other measurements or control values are to apply, the appropriate measurement methods must be specified prior to delivery and acknowledged by both Parties. Unless such values are so defined, our own measurement methods will apply.
9. Samples will only be delivered subject to a fee.
10. Assurances given, ancillary agreements and changes to the contract will require the written form to be operative. It will not be possible to waive this requirement.
11. An order placement will be deemed irrevocable unless the Deliverer has agreed in writing to cancel it.
12. For export transactions, delivery will be subject to the conditions specified on the order confirmation; in addition, the respectively current version of the international trade definitions most commonly used in international sales contracts (incoterms 1953) will apply as devised by the International Chamber of Commerce.
13. In addition to the General Terms of Delivery and Sale, compliance with our "product information" sheets, the technical data sheets as well as other product-specific publications will apply, each in their current version.

§ 2 Prices

1. Failing specific written agreement, prices apply as in the Federal Republic of Germany, free house plus the value added tax required by law. For export transactions, the item to be delivered is deemed sold "ex works", unless the contract stipulates otherwise about the type of sale. For single orders for a value of goods less than 100.00 € net, a handling fee of 10.00 € plus the value added tax required by law will be charged throughout the country.
2. Please note that we only despatch the consignment at the request of the customer. Irrespective of this, the rulings laid down in Section 5 will apply.
3. We bill the prices that were valid when the contract was drawn up, based on the cost factors applicable at the time. Should these cost factors (particularly material, wages, energy etc.) alter during the period between the drawing up of contract and the agreed delivery time, we will be entitled to amend prices accordingly. For export transactions, the Deliverer will be entitled to cancel that part of the order that has not yet been completed or to adjust prices appropriately if the currency in which the contract was drawn up has devalued.
4. With an "ex works" contract, the goods will be transported at the expense and risk of the Orderer. For all consignments, the respectively current version of the provisions of incoterms 1953 will apply to the insurance and bearing of risk.
5. For parts/products that are produced in line with Purchaser requirements, we will notify the Purchaser of our production quantity. The Purchaser undertakes to take receipt of the quantity thus confirmed.
6. Over-deliveries and short-deliveries are admissible up to 5%; for special tooling up to 10% is admissible, at least, however, 2 (two) pieces. The respective delivery will be billed.

§ 3 Modalities of Payment

1. Failing specific arrangements, payment is due without deduction and without charges within 10 days of the date of invoice - even for delivery instalments.
2. We are not bound to accept cheques or bills. In the event cheques or bills are accepted subject to prior arrangement in individual circumstances, this will only be as conditional payment, taking due account of discount charges and collection fees that are to be paid immediately in cash by the Customer. The ultimate credit entry of bills of exchange and cheques will be after their redemption. The acceptance of cheques or bills will be without prejudice for subsequent commitments to payment. We will not be liable for the punctual presentation, protest, notification and return of a bill in the event it is not honoured.
3. Any overshooting of the payment deadline will incur interest to the amount of the banks' borrowing costs, at least, however 8% in excess of the respective basic interest rate of the European Central Bank.
4. If a bill or a cheque is not honoured on time or if a deadline for payment is over-reached, all receivables still outstanding, including those that are deferred and those for which bills or cheques have been given, will become due for immediate payment.
5. The Purchaser will only be entitled to offset if the counterclaims he asserts have been established by declaratory judgment, if they are undisputed or have been acknowledged by us. The Purchaser will be authorized to exercise a right of retention to the extent his counterclaim is derived from the same contractual relations.
6. For export transactions, payments will be paid subject to the modalities of payment contracted.

7. Costs of payment transactions, particularly bank charges of foreign payment transfers to us, are in principle for debits of the client.

§ 4 Delivery Period

1. The delivery period we specify begins to run providing all technical issues have been fully clarified. The delivery deadlines we give are in principle not binding and only constitute a probable delivery time.
2. The compliance with our commitment to deliver depends on the Purchaser having punctually and properly fulfilled his commitments, particularly his commitment to comply with the contracted terms of payment. The right to plea non-performance of contract will be retained. This right will also be derived from commitments that have not been satisfied in full from previous deliveries.
3. The period of delivery commences upon the despatch of the order confirmation, yet not before the Orderer has provided the documents, permits, clearance papers etc. to be procured and not before the agreed deposit has been received.
4. If a fixed delivery date has been arranged, the Deliverer will effect delivery on time. Compliance with the delivery period will be deemed given if the item to be delivered has left the works or the readiness for despatch has been notified before the expiry of said delivery period, subject to timely and accurate delivery from our own suppliers. If the Orderer amends parts of the consignment to be delivered, the delivery period will run anew upon confirmation of said amendment.
5. Force majeure, war, uprising, strike, lock-out or measures enforced by the authorities for whatever reason that impede delivery, as well as a lack of raw materials, means of transport and theft – even with our own suppliers – will release the Deliverer from his commitment to deliver within the specified period of time. The Orderer will be notified immediately of the occurrence of the hindrance and of the likely repercussions.
6. It is admissible to effect delivery prior to the expiry of the specified delivery period and to deliver in appropriate instalments.
7. Compliance with the delivery period depends on the fulfilment of all contractual duties of the Orderer.
8. In the event of delivery delays or of the impossibility of delivery, the provisions of Section 10 will apply.

§ 5 Transfer of Risk and Taking Receipt

1. Risk will pass to the Orderer at the latest with the despatch of the consignment, even if delivery is to be in instalments or if we still have other services to provide, e.g. despatch costs or transport and delivery as well as installation.
2. At the request and at the expense of the Orderer, we will ensure insurance cover of the consignment to be delivered for theft, breakage and damages from transportation, fire and water and for other insurable risks.
3. If despatch is delayed for reasons for which the Orderer is responsible, the risk will pass to the Orderer as from the date of readiness for despatch; nevertheless, we undertake to ensure insurance cover at the request and expense of the Orderer as called for by the Orderer.
4. Even if the delivered items feature insignificant defects, the Orderer will take receipt thereof irrespective of the rights laid down in Section 8.

§ 6 Default of Acceptance, Call-off Orders

1. If the Orderer fails to take receipt of the items contracted on time, we will be entitled to set the Orderer a subsequent period of grace after which we will be entitled to dispose of the items otherwise and supply the Orderer subject to a subsequently lengthened delivery period. Irrespective of this, we will be entitled to withdraw from the contract as defined in Section 326 BGB [German Civil Code] and to call for compensation for damages owing to non-performance. In the event we call for compensation for non-performance, we will be able to claim compensation of 25% of the agreed price plus value added tax without having to provide evidence. We retain the right to assert actual damages of a greater dimension.
2. Orders, which we confirm for call-off must be accepted within one year of the date of order placement at the latest - unless otherwise arranged. The same will apply to fixed reservations or to permanent "call-off" statuses. Section 6.1 will apply accordingly in the event the goods are not called off.

§ 7 Retention of Title

1. The items for delivery (the goods subject to the retention of title) will remain our property until all claims to which we are entitled from the Purchaser from the business relations have been satisfied in full. Where the value of all security interests to which we are entitled against the Purchaser exceeds all secured claims by more than 10%, we will release some of the security interests as appropriate at the request of the Purchaser.
2. During the period in which title to the goods is retained, the Purchaser is not allowed to pledge or assign the goods as security and is only permitted to resell to resellers in normal business transactions and only providing the reseller receives payment from its own customer or subjects the customer's ownership of the item to the full satisfaction of the customer's commitments to payment.
3. In the event of attachment, seizure or any other disposition or third-party intervention in respect of the goods, the Purchaser will notify us immediately so that we can file action subject to Section 771 ZPO [German Code of Civil Procedure]. If the third party is not able to reimburse us for the court and out-of-court costs of legal action pursuant to Section 771 ZPO, the Purchaser will be liable for the loss we thus incur.
4. The Purchaser undertakes to treat the item purchased with care. In particular, the Purchaser undertakes at his own expense to ensure it is adequately insured at reinstatement value against damages from fire, water and theft. Should maintenance and inspection work be required, the Purchaser will have this carried out in good time at his own expense.
5. In the event of breaches of duty on the part of the Purchaser, particularly with default in payment, we will be entitled to cancel the contract and to take back the goods; the Purchaser undertakes to surrender the goods. If we take back the goods and/or assert the retention of title, this does not mean we are cancelling the contract, unless we have explicitly declared as much.

General conditions of sale and delivery

6. If the Purchaser has resold the item purchased in regular business transactions, the Purchaser herewith now assigns to us all claims to payment in the amount of the final invoice amount (including value added tax), such as due to the Purchaser from the resale to his customer or a third party, irrespective of whether the item purchased has been resold without or after further reworking. The Purchaser remains authorized to collect this payment, even after assignment. Our own authority to collect payment ourselves will not be affected hereby. However we undertake not to collect payment providing the Purchaser satisfies his own commitments to payment from the proceeds collected, does not default in payment and in particular providing the initiation of insolvency proceedings is not petitioned or payments cease to be made. Should this, however, be the case, we will be able to demand that the Purchaser provides us with details of the assigned payments and their debtors as well as all information necessary to collect payment, that he hands over the relevant documentation to us and notifies the debtors (third parties) of the assignment.

7. The processing or reworking of the item purchased by the Purchaser will always be carried out on our behalf. If the item purchased is processed with other items not belonging to us, we will acquire co-ownership to the new item to the value of the item purchased (final invoice amount including value added tax) in relation to the other processed items at the time of reworking. The same will apply to the thus newly created items as for the items delivered subject to retention of title.

8. If the item purchased is processed with other items not belonging to us, we will acquire co-ownership to the new item to the value of the item purchased (final invoice amount including value added tax) in relation to the other processed items at the time of reworking. If the intermixing is such that the Purchaser's item is to be deemed the main item, it is herewith agreed that the Purchaser will transfer co-ownership to us proportionately. The Purchaser will keep the property in which we hold exclusive ownership or co-ownership on our behalf.

§ 8 Quality Defects

We are liable for defects in quality as follows:

1. All parts or services will be remedied, at our discretion, free of charge or redelivered or provided again that are found to feature a quality defect during the statutory period of limitation - irrespective of service life - providing the origin thereof already existed at the time of the passing of risk.

2. Claims to quality defects will become statute-barred in 12 (twelve) months. The period of time commences with the passing of risk (Section 6).

3. The Purchaser will immediately file written objection to the quality defect with us.

4. In the event objections are filed, the Purchaser will be permitted to refrain from payment to an extent appropriate to the quality defects featured. The Purchaser will only be able to refrain from payment if an objection is asserted, the justification of which cannot be doubted. If the objection has been asserted unjustifiably, we will be entitled to call for the reimbursement of the expenses incurred by us.

5. Initially we will always be granted an opportunity to remedy a defect within an appropriate period of grace.

6. Should the remedy fail, the Purchaser – notwithstanding any claims to damages – will be able to cancel the contract or reduce remuneration. The Purchaser will only be able to call for the reimbursement of fruitless expenditure if the defect in question is attributable to our own wilful intent or gross carelessness for which we are responsible.

7. Claims to defects in quality are not given if the divergence from the agreed nature of the product is only minimal, if usability is only insignificantly impaired, in cases of natural depreciation or damages generated after passing of the risk as a result of faulty or negligent treatment, excessive exposure, unsuitable operating media or because of specific outer impact that was not to be expected given the contract, as well as in cases of non-reproducible software errors. If amendments or repair work is carried out improperly by the Purchaser or by third parties, there will be no claims to the defects resulting or the effects thereof. The same will apply to a lack of compliance with our instructions on handling and other instructions and if maintenance is not carried out properly.

8. Claims of the Purchaser to a refund of the expenses incurred for the purpose of remedy, such as costs of transport, travel, labour and materials will be ruled out, when such expenses increase because the item delivered was brought to a destination other than the Purchaser's branch premises, unless said relocation is in accordance with the intended use of the item.

9. Legal claims to recourse against us on the part of the Purchaser will only be given if the Purchaser has entered into no agreement with his customer in excess of those claims to defects regulated by the law.

10. Claims to compensation for damages will be governed by Section 9. Any farther-reaching claims to quality defects or others than those governed in this Section or in Section 9 will be ruled out.

§ 9 Industrial Property Rights and Copyrights, Defects of Title

Unless otherwise agreed, we undertake to only effect delivery free from proprietary rights and third party copyrights (referred to in the following as industrial property rights) in the country of the delivery destination. In the event a third party files justified claims against the Purchaser for a breach of industrial property rights derived from deliveries we effected that are being used as contracted, we will be liable towards the Purchaser for the period of time specified in Section 8.2 as follows:

1. At our discretion and at our own expense, we will either procure a licence for the deliveries in question, alter them so that there is no breach of industrial property rights or we will provide a substitute. Should this not prove possible at appropriate conditions, the Purchaser will be entitled to the rights of cancellation or reduction as laid down by the law. The Purchaser will only be able to call for the reimbursement of fruitless expenditure if we are to blame for wilful intent or gross negligence. Our commitment to provide compensation for damages is governed by Section 10.

2. The above commitments will only be given if the Purchaser has given us immediate, written notification of the claims asserted by the third party, does not recognise any breach of rights and if we retain the right to initiate defence measures and negotiate a settlement. If the Purchaser ceases to use the item delivered in order to reduce damages or for other good cause, the Purchaser undertakes to inform the third party that this discontinuation of use does not embody any acknowledgement of a breach of industrial property rights.

3. Claims of the Purchaser will be ruled out if the Purchaser is responsible for the breach of industrial property rights.

4. Any claims of the Purchaser will also be ruled out if the breach of industrial property

rights was derived from specific specifications of the Purchaser, from an application that we could not foresee or from the item delivered being altered by the Purchaser or used in combination with products that we have not delivered.

5. In the case of breaches of industrial property rights, the provisions of Sections 8.4, 8.5 and 8.9 will apply appropriately to the claims of the Purchaser governed by Section 13.

6. Any farther-reaching claims to defects of title of the Purchaser or claims other than those governed by the present Section 9 against us or our vicarious agents will be ruled out.

§ 10 Overall Liability

1. Claims of the Purchaser to compensation for damages – irrespective of the legal nature of the claim asserted – will be ruled out.

2. The exceptions are:

a) Damages due to the violation of major contractual duties (cardinal duties). However, in the case of simple negligence, liability for damages will be restricted to foreseeable, typically occurring damages.

b) Damages derived from injury to life and limb if we are responsibility for the breach of duty.

c) Damages attributable to wilfully intentional or negligent violations, said breach of duty on the part of our legal representatives or vicarious agents being of equal status to any breaches of duty on our part.

d) Claim to damages for impossibility or inability.

3. Any alteration of the onus of proof to the detriment of the Purchaser does not relate to the above provisions.

4. Liability subject to the Product Liability Act remains unaffected hereby.

5. Where liability for compensation is ruled out or restricted in our respect, this will also apply to the personal liability for damages of our employees, our trade representatives and our vicarious agents.

§ 11 Duties to Involvement of the Purchaser

1. The involvement of the Purchaser that has been agreed to explicitly or implicitly in the contract will be subject to no specific remuneration, unless otherwise explicitly agreed.

2. The Purchaser undertakes to inform us in good time of all facts, which indicate that stocks and products we have made available in the light of our notified production capacities cannot be used or not be used in full. Where stock remains, in the case of a premature change to his planning, the Purchaser will take over the remainder and any costs of destruction that might be incurred. This will also apply to products for which we have had to place orders for minimum quantities from our own suppliers, providing we previously advised the customer thereof.

3. The Purchaser guarantees that the products delivered by him for reworking are suitable for the purpose. We do not undertake to check the products delivered by the Purchaser for their quality and aptitude for reworking. In ongoing business relations and whenever an item for reworking has been initially checked, tested and released, the Purchaser undertakes to inform us in writing of each and every product amendment without actually being requested to do so. When items are being reworked, after every change in production conditions on his premises, in particularly when substituting tooling, machinery or introducing new production processes, the Purchaser also undertakes to examine the item to be processed by us for any divergence and alteration and to notify us in writing of any such divergence and alteration.

4. Instructions from our Purchaser, the selection of material or other specifications laid down by the Purchaser do not oblige us to check them for accuracy.

5. The Purchaser will hence check all instructions it issues as well as the quality of the material specified to us or made available to us for compliance with the law and technical regulations.

6. Should the Purchaser default in terms of its duties to provide or to become involved, we will be entitled to the rights stipulated by law.

7. In any case, goods may only be returned subject to the explicit consent of the Deliverer. Their return will be free-house and details of the order number and delivery date will be given as well as the original delivery packaging. The goods will be in their original condition, i.e. in an undamaged state. For the handling of a return, we charge 20% of the value of the goods, at least, however, 50.00 € plus value added tax. In individual circumstances, the Deliverer retains the right to charge the Orderer a higher sum based on evidence.

§ 12 Place of Performance and Jurisdiction/ Other

1. The place of performance and payment will be the registered office of our company in Sontheim/Brenz.

2. Exclusively the laws of the Federal Republic of Germany will govern the present contractual relations. The application of the United Nations Convention dated 11.04.80 on Contracts for the International Sale of Goods (CISG – "Wiener Kaufrecht") is ruled out.

3. For all disputes derived from contractual relations, if the Orderer is a registered businessperson, a legal entity under public law or a separate estate under public law, legal action will be filed with the court of law with jurisdiction for our registered office. We will also be entitled to file legal action at the location of the registered seat of the Orderer.

4. Should any one condition of our General Terms of Sale and Delivery be void for any reason whatsoever, the validity of the remaining provisions will not be affected hereby.

5. We will save your data in accordance with Section 23 BDSG [Federal Data Protection Act].

RÖHM GmbH

D-89565 Sontheim/Brenz

Revised: September 2012

” RÖHM – we’re here to serve you.

We offer real partnership.

We see this reflected in collaborative partnerships both with specialist dealers as well as directly with consumers. We offer sound advice, provide comprehensive support and do our utmost for you, so that you get exactly the right solution for meeting your targets safely and economically. And if there isn't a solution available yet, then we'll design it.
